

ABSTRACT

The invention relates to a fuel delivery unit (2) wherein a space between a baffle pot (3) and a fuel pump (4) is filled with filter material (13) of a fuel filter (6). The baffle pot (3) is injection-molded onto the filter material (13) and is provided with a recess (14) for directly receiving the fuel pump (4). The fuel delivery unit (2) has an especially simple design and can be easily installed.
